EUSPA User Consultation Platform (UCP) 2022

Emergency Management and Humanitarian Aid segment

What is the structure of the agenda?

An updated version of the agenda can be found online for your convenience. Our session is part of the User Consultation Platform (UCP) of EUSPA, which will run 7 parallel sessions in various market segments. A general welcome to all UCP participants is planned between 10:00-10:30 in the Venue, please note that this is a generic welcome – we have received indication that space might be limited, since all sessions will be welcomed together.

Our session starts on Monday 3rd October at 10:30 with a series of introductory and informative presentations about the state of the Copernicus Emergency Management Service and Galileo/EGNOS services; followed by an intervention by DG ECHO. We plan to close this introduction at 11:30 with a short overview of the market segment.

At 11:40, we will start the one-hour sessions on the 4 selected applications:
Application 1) Post-crisis damage assessment and building inspection,
Application 2) Monitoring of landslides,
Application 3) Asset management in humanitarian aid operations,
Application 4) Health, medicine response and coordination.

The launch break is foreseen between 12:45-14:00, between application (1) and (2) – see agenda. This timeslot might slightly change, to accommodate all the participants and ensure that space is available for all.

What will happen on the 4th Oct?

The main part of our session, as communicated to you, will take place on Monday 3rd Oct.

European Union Agency for the Space Programme

Headquarters

Janovskeho 438/2
17000 Prague 7
Holesovice, Czech Republic

On the 4th Oct. the Plenary session will take place. A summary of all segments will be presented in the plenary panel; including the one on Emergency Management and Humanitarian Aid.
If you are still around and would like to join us, you are more than welcome.

I'm joining physically but I'm not presenting. How can I participate?

For each application to be discussed, there will be one "*user representative*" delivering a presentation. We don't have a series of presentations, because we want to enable discussions and interactions.
We are pre-planning **verbal interventions** for participants, in order to structure the discussion better.
If you want to intervene in any (some, or all) of the above-mentioned application sessions, just let us know by emailing the coordinator (Vasileios.kalogirou@euspa.europa.eu) and we will make sure that your intervention is planned (e.g. "*I would like to intervene on application (3) and (4)*"). In any case, you will be able to intervene anytime during the Q&A session. The pre-planning assists us to know in advance the level of intended participation per application.

What is the outcome of the session?

The session will present and review EO and GNSS needs and requirements connected to the applications that will be presented. The outcome will be the adoption of a set of needs and requirements that will pave the way for implementing these applications. The **attached data-pack** includes the document which will adopted as a result of the session. Your inputs and comments are more than welcome and this is the reason we share it in advance with you. Any participant can contribute to it and comments will be reviewed by EUSPA and discussed during the session.
