

Alberto Mennella, *Cofounder & CTO, TopView Srl*

Alberto holds an MSc in Telecommunication Engineering and an MSc in Nautical Sciences with a specialisation in radio navigation, achieved in 2004 at the University of Naples Parthenope. He has worked in various companies in the aerospace industry such as Thales Alenia Space Italy and in the OHB-Italia group, and in different space programmes in both GNSS and Earth Observation as a system engineer and project manager, with more than 13 years of experience.

In 2013, motivated by a true passion for aerospace, he founded TopView - a start-up company consisting of three people, which has since grown, created to explore the growing new market for Unmanned Aerial Systems (drones). Alberto is member of various advisory boards for the development of the U-Space (the unmanned traffic management system for Europe) as well as author and co-author of several scientific papers in the UAS/aviation and high accuracy positioning domain. He is on the technical board of ASSORPAS (the first Italian association for the development of UAS operations) and he recently joined, with TopView, the Drones Rescue Network - a non-profit association related to the Italian "Protezione Civile", the main purpose of which is to provide operational support to drones during search and rescue and emergency management activities.
