

**Fabienne Jacq**, *Policy officer;*  
*European commission, DG GROW*

Just after engineering studies in solid state physics, **F. Jacq** started working for the space sector both in Satellite communications and Earth Observation. In the late 90's she managed major projects for the development of applications of Earth Observation for environment and security in the private sector, in Airbus and then CLS, a subsidiary of the French Space agency, as deputy director for space oceanography and director for data collection service. Involved in GMES since start, she contributed to the development the Copernicus Marine Service and is now in charge of its management at the European Commission.
