

#EUSpace 

# EU SPACE WEEK 2023

7 - 9 November - Sevilla, Spain

## Update of rail user requirements

UCP – Rail Segment

Juliette Marais

European  
Commission

# Background

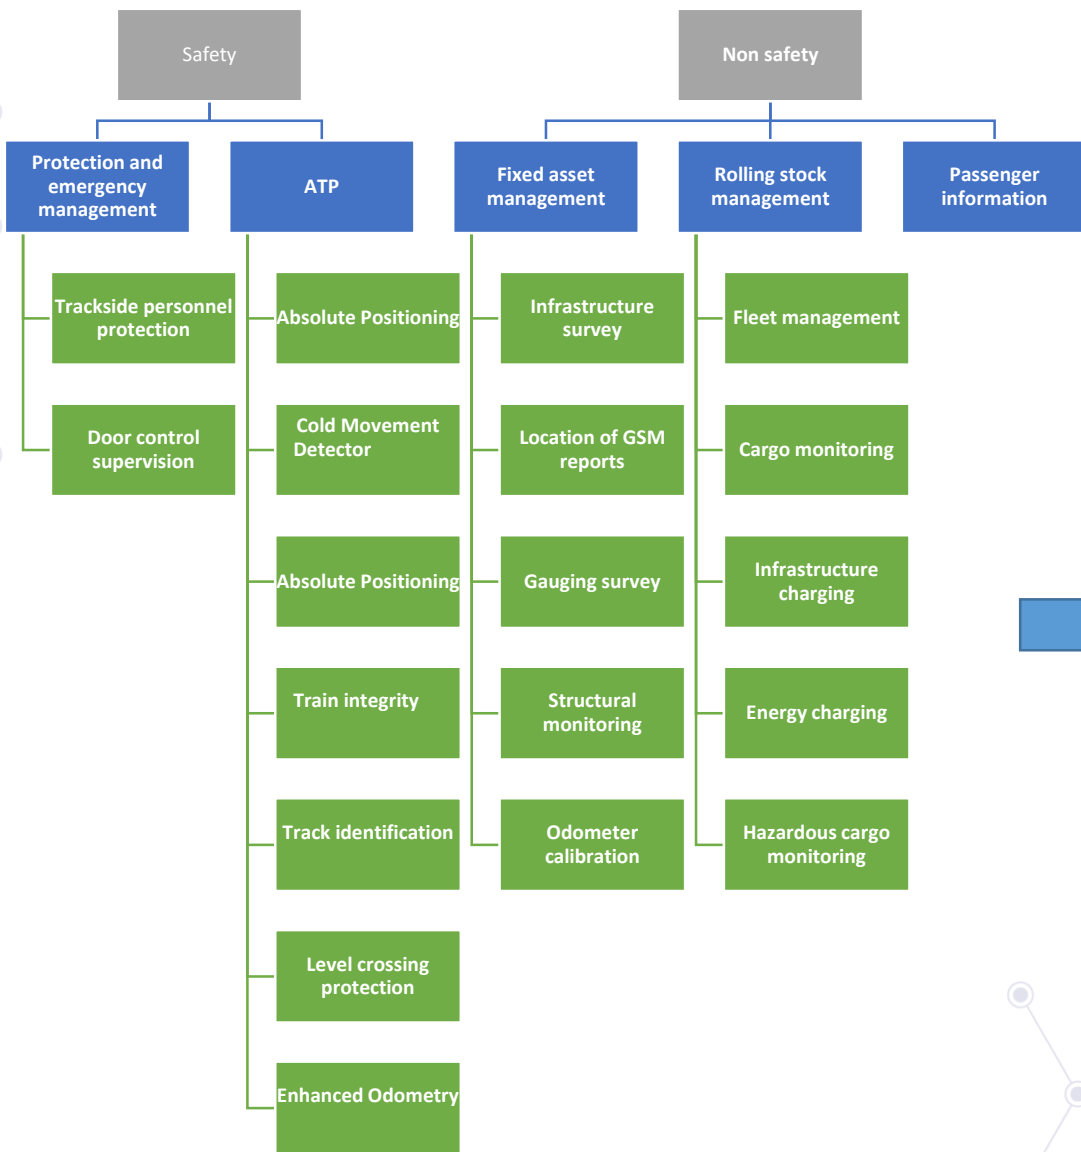

- Existing Report (2018)
- Updated in 2019 after UCP.
- Annex added after UCP 2020
  
- Rail not discussed @UCP 2021

# 1. The list of applications

Sub-segments	Applications	Types of Application/ Level of Investigation	
		Level	Investigation
MAINTENANCE IMPROVEMENT	Condition-based maintenance	A	●
	Infrastructure monitoring	A	●
	Predictive maintenance	A	●
ATTRACTIVENESS ENHANCEMENT	Passenger information systems	A	●
	Public Transport – Tram and Light Rail	C	○
SAFETY RELATED	Enhanced Command & Control Systems (CCS)	A	●
	Trackside personnel protection systems	A	●
	Hazardous cargo monitoring	B	◐
	Door Control supervision	B	◐
TRAIN DRIVING OPTIMISATION	Rail fleet management	A	●
	Driver Advisory Systems (DAS)	A	●

Table 1 Applications and level of investigation

# What's new? What is removed?

**NEW**

- Driver Advisory System
- Condition-based maintenance
- Predictive maintenance

- Infrastructure charging
- Energy charging
- Location of GSM reports

Merged

- Train integrity

- Level crossing protection

Still postponed

# Objectives of this session

Table 11: Requirements for Train Integrity and train length monitoring

Id	Description	Type	Source
GSA-MKD-USR-REQ-RAI-0170	The PNT solution shall provide the train position with a horizontal accuracy within a range of 1-10m.	Performance (Accuracy)	[RD4]: ESSP-TN-12586 v01-00 "EGNOS V3 requirements for the rail domain", 20.11.2014
GSA-MKD-USR-REQ-RAI-0180	The availability of the location information provided by the PNT solution fulfilling its performance requirements shall be High.	Performance (Availability)	[RD27]: UNIFE validation interview, 13.01.2016
GSA-MKD-USR-REQ-RAI-0190	The ability of the PNT solution to provide timely warnings to the user when data provided by the solution should not be used shall be Very High.	Performance (Integrity)	[RD27]: UNIFE validation interview, 13.01.2016
GSA-MKD-USR-REQ-RAI-0200	The PNT solution shall achieve a Safety Integrity Level 4.	Performance (Safety Integrity Level)	[RD4] [RD27] [RD31]
GSA-MKD-USR-REQ-RAI-0210	The maximum allowable time between the occurrence of the failure in the PNT solution and its presentation to the user shall be between 10s and 30s.	Performance (Time To Alarm)	[RD4]: ESSP-TN-12586 v01-00 "EGNOS V3 requirements for the rail domain", 20.11.2014 [RD27]: UNIFE validation interview, 13.01.2016

2019 update to

Table 12: Requirements for Track Identification

Id	Description	Type	Source
GSA-MKD-USR-REQ-RAI-0220	The PNT solution shall provide the train position with a horizontal accuracy lower than 1.9m for track discrimination.	Performance (Accuracy)	[RD4] [RD27] [RD31]
GSA-MKD-USR-REQ-RAI-0230	The availability of the location information provided by the PNT solution fulfilling its performance requirements shall be High.	Performance (Availability)	[RD4]: ESSP-TN-12586 v01-00 "EGNOS V3 requirements for the rail domain", 20.11.2014
GSA-MKD-USR-REQ-RAI-0240	The ability of the PNT solution to provide timely warnings to the user when data provided by the solution should not be used shall be Very High.	Performance (Integrity)	[RD27]: UNIFE validation interview, 13.01.2016
GSA-MKD-USR-REQ-RAI-0250	The PNT solution shall achieve a Safety Integrity Level 2-4.	Performance (Safety Integrity Level)	[RD27]: UNIFE validation interview, 13.01.2016
GSA-MKD-USR-REQ-RAI-0260	The maximum allowable time between the occurrence of the failure in the PNT solution and its presentation to the user shall be between 10s and 30s.	Performance (Time To Alarm)	

2019 update to

1. Update the list of applications?  
Add/Remove?
2. Add new requirements  
Some values proposed, to be validated  
Some values missing: do you have some inputs?
3. Update existing requirements  
if you have new inputs?

## 2. What are we discussing?

# What are we discussing?

GNSS user requirements for XXX		
Accuracy	Horizontal	
	Vertical	Non-applicable
Availability	Urban canyon	Yes, XX%
	Natural canyon	Yes, XX%
	Canopy	Yes, XX%
	Indoor	Yes, XX%
	Better than 95%	High/Low?
	Better than 99%	High/Low?
Robustness		TBD
Integrity and reliability		Low?High?Very high?
Size, weight, autonomy (when smartphone or handheld based)	Relevance	Yes/No?
	Time a device can run	TBD
TTFaF	In hot start	Xs
Service area	Geographical coverage	Over the whole EU network
Update rate		Xs
TTA	Time between the occurrence of the failure and its presentation to the user	Xs
SIL		If appropriate SIL level

**NEW**

**NEW**

**NEW**

## Definitions (1/2)

- **Accuracy:** can be horizontal/vertical, sometimes along track/across track
- **Availability:** : the percentage of time the position, navigation or timing solution can be computed by the user.
- **Integrity** is the probability of a user being exposed to an error larger than the alert limits without timely warning.
- **Time-To-Alarm:** is the time between the occurrence of the failure and its presentation to the user.

## Definitions (2/2)

- **TTFF- Time to first fix:** Accounts for the time elapsed from the GNSS receiver switch-on until the output of a navigation solution within a certain performance
- **Update rate:** Time interval between 2 positions **Robustness:** relates to spoofing and jamming and how the system can cope with these issues.
- **SIL** refers to the reliability of the system. The SIL level is expressed in the basic 4 levels

### 3. First set of questions...

# Robustness – a new requirement in the RUR

- **Robustness** relates to spoofing and jamming and how the system can cope with these issues. It is a more qualitative than quantitative parameter and depends on the type of attack or interference the receiver is capable of mitigating. Robustness can be improved by authentication information and services.
- For which applications is it relevant?

Application	Y/N	Application	Y/N
Driver Advisory System		ECCS - Track identification	
Trackside personnel protection		ECCS - Cold Movement detection	
Rail fleet management		ECCS - Enhanced odometry	
Passenger information		Door control supervision	
Hazardous cargo monitoring			

# Size, weight, autonomy – new requirements in the RUR

- Which of these applications relies on smartphones or handheld devices?

Application	Y/N	Application	Y/N
Driver Advisory System	●	ECCS - Track identification	
Trackside personnel protection	●	ECCS - Cold Movement detection	
Rail fleet management	●	ECCS - Enhanced odometry	
Passenger information		Door control supervision	
Hazardous cargo monitoring	●		

- Do some of the « N » still require specific autonomy, size, or weight?

# Vertical accuracy

- Is there any existing requirement related to vertical accuracy?
- Can we consider it as not applicable for every application or do you see any application where it could be useful?

## 4. Focus on new applications

- The DAS – Driver Advisory System
    - first draft to be discussed
  - Condition-based maintenance
  - Predictive maintenance
- a proposed table based on previously collected requirements for cargo monitoring

# Driver Advisory Systems - DAS

Driver Advisory Systems (DAS) are a proven means of reducing energy consumption in the rail freight sector.

- Standalone DAS (S-DAS) advises drivers using a static timetable, manually loaded in advance, and so is unaware of subsequent changes

- Connected DAS (C-DAS) takes data from Traffic Management (TM) systems and automatically sends changes in real-time to the DAS system onboard the train.

**NEW**

### GNSS user requirements for Driver Advisory System

<b>Accuracy</b>	Horizontal	1m for track distinction
	Vertical	NA
	Urban canyon	Yes
<b>Availability</b>	Natural canyon	Yes
	Canopy	Yes
	Indoor	Yes
	Better than 95%	High
	Better than 99%	High
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		Low
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	Yes
	Time a device can run	8-10h (daily service of a driver)
<b>TTFaF</b>	In hot start	1 min
<b>Service area</b>	Geographical coverage	Over the whole EU network
<b>Update rate</b>		1s
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	10s

If track is known?

? Today relies on COTS cheap Rx but what would be the optimal requirements?

? Do we need to make the req. evolve for CDAS?

# Condition and Predictive-based maintenance

- Condition Based Maintenance is a maintenance strategy to monitor the real-time condition of tracks and trains. These results are large data sets that give away key information to support decision-making and enable efficiency gains.
- CBM suggests a prognostic attitude towards maintenance, that can be realized by constantly monitoring the conditions of an asset, consequently allowing triggering maintenance activities only if any potential asset degradation is detected [1].
- Predictive maintenance builds on condition-based monitoring to optimize the performance and lifespan of equipment by continually assessing its health in real time. Predictive maintenance techniques are designed to help determine the condition of in-service equipment in order to predict when it is going to fail and plan repairs before the need to be unexpectedly taken out of service for emergency or unnecessary routine maintenance [2].

[1] Emanuele Fumeo, Luca Oneto, Davide Anguita, Condition Based Maintenance in Railway Transportation Systems Based on Big Data Streaming Analysis, Procedia Computer Science, Volume 53, 2015

[2] <https://www.globalrailwayreview.com/article/68263/predictive-maintenance-opportunity-rail/>, <https://www.railwaysignalling.eu/corrective-preventive-and-predictive-maintenance-for-railway-applications>

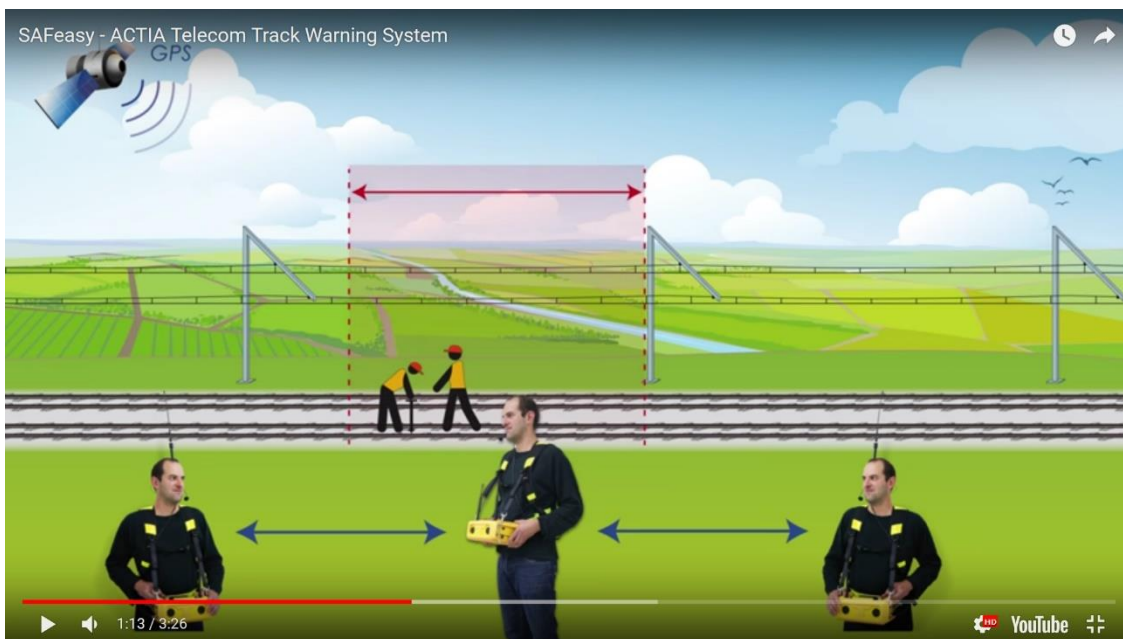

? These req. have been agreed for cargo monitoring. Is it ok?

### GNSS user requirements for Condition-based maintenance

<b>Accuracy</b>	Horizontal	10-20 m-level longitudinal
	Vertical	NA
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes
	Better than 95%	High
	Better than 99%	Medium
<b>Robustness</b>		<b>TBD</b>
<b>Integrity and reliability</b>		Low
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	Yes?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	TBD
<b>Service area</b>	Geographical coverage	Over the whole railway network
<b>Update Rate</b>		60s (fleet), 30 min (cargo) - TBD
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	30s

# Trackside personnel protection

Identified application: GNSS for continuous control of the min distance between equipment

**GNSS user requirements for trackside personnel protection**

<b>Accuracy</b>	Horizontal	1 to 10 m-level The PNT shall provide a small relative accuracy
	Vertical	Non applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes
	Better than 95%	High
	Better than 99%	High?
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		High
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	Yes?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	Some minutes
<b>Service area</b>	Geographical coverage	available over the whole EU Rail network
<b>Update rate</b>		5 - 10s
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	10 - 30s
<b>SIL</b>	For ATO application	SIL2 corresponding to a failure rate of $10^{-7}$ /hr

NEW

## 5. Refining previous requirements...

**GNSS user requirements for fleet management**

<b>Accuracy</b>	Horizontal	10 to 20 m-level longitudinal after track identification
	Vertical	Non-applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes
	Better than 95%	High
	Better than 99%	High
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		Low
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	Yes?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	TBD
<b>Service area</b>	Geographical coverage	Over the whole EU rail network
<b>Update Rate</b>		60s
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	30s

**NEW**

GNSS user requirements for Passenger information

<b>Accuracy</b>	Horizontal	100 m-level
	Vertical	Non-applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes
	Better than 95%	High
	Better than 99%	Medium
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		Low
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	No?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	Less than 10s
<b>Service area</b>	Geographical coverage	Over the whole EU network
<b>Update rate</b>		1s

NEW

**GNSS user requirements for Hazardous cargo monitoring**

<b>Accuracy</b>	Horizontal	1-10 m-level
	Vertical	Non-applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes
	Better than 95%	High
	Better than 99%	Medium
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		High
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	Yes?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	TBD
<b>Service area</b>	Geographical coverage	Over the whole EU network
<b>Update rate</b>		15 min
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	10 - 30s

# Safety critical functions

- Enhanced Command and Control Systems
  - Track identification
  - Cold Movement detection
  - Enhanced odometry
- Door control supervision

### GNSS user requirements for Track Identification

<b>Accuracy</b>	Horizontal	1.9 or 2.25m maximum depending on the inter-track distance
	Vertical	Non-applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes, 99,99%
	Better than 95%	High
	Better than 99%	High
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		Very high
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	No?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	5s
<b>Service area</b>	Geographical coverage	Over the whole EU network
<b>Update rate</b>		1s
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	10-30s
<b>SIL</b>		SIL 2-4

The CMD delivers a SIL4 function to supervise vehicle movement during the power off phase, transmitting the information to the ETCS on-board system.

### GNSS user requirements for Cold Movement Detection

<b>Accuracy</b>	Horizontal	Longitudinal accuracy < 1m As long as track identification is ensured  The PNT shall provide a relative accuracy < 1m
	Vertical	Non-applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes, 99,99%
	Better than 95%	High
	Better than 99%	High
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		Very high
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	No?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	5s
<b>Service area</b>	Geographical coverage	Over the whole EU network
<b>Update rate</b>		1s
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	< 10s
<b>SIL</b>		SIL 4 that corresponds to a failure rate of $10^{-9}$ /hr

Enhanced Odometry is the use of data from moving sensors to estimate change in position over time. The 'enhanced odometry' concept refers to the use of sensors based on novel technologies, such as GNSS, in the estimation of train speed (GRAIL-2)

### GNSS user requirements for Enhanced Odometry

<b>Accuracy</b>	Horizontal	Travelled distance $\pm 5m + 5\%$ of the distance since the last balise
	Vertical	Non-applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes, 95%
	Better than 95%	
	Better than 99%	
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		TBD
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	TBD
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	TBD
<b>Service area</b>	Geographical coverage	Over the whole EU network
<b>Update rate</b>		TBD
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	< 5s
<b>SIL</b>		TBD

The purpose of this application is to enable the opening of specific doors at particular stations.

### GNSS user requirements for Door Control Supervision

<b>Accuracy</b>	Horizontal	1-10 m-level When using ATO: 1m
	Vertical	Non-applicable
<b>Availability</b>	Urban & natural canyons, canopy, indoor	Yes
	Better than 95%	High
	Better than 99%	Medium?
<b>Robustness</b>		TBD
<b>Integrity and reliability</b>		High
<b>Size, weight, autonomy (when smartphone or handheld based)</b>	Relevance	No?
	Time a device can run	TBD
<b>TTFaF</b>	In hot start	TBD
<b>Service area</b>	Geographical coverage	Over the whole EU network
<b>Update rate</b>		TBD
<b>TTA</b>	Time between the occurrence of the failure and its presentation to the user	10 - 30s
<b>SIL</b>		TBD? SIL 2?

# Any regret?

©Maurizio Quarello, Au bout des rails, Ed. Sarbacane, 2009

- Application that has not been mentioned?
- Some great update on existing requirements to share?
